

FREE GUIDE · 2026 EDITION

Choosing the Right Streaming Device

Fire TV, Google TV, Roku, Apple TV or your smart TV — for Irish homes

onairireland.ie · Updated November 2026 · 100% licensed, legal services only

Start here: do you even need one?

Every legal streaming service in Ireland — RTÉ Player, Virgin Media Play, TG4 Player, Netflix, Disney+, HBO Max, NOW, GAA+ and the rest — runs through an app. The only question is *where* that app runs: on the TV itself, or on a small device plugged into it.

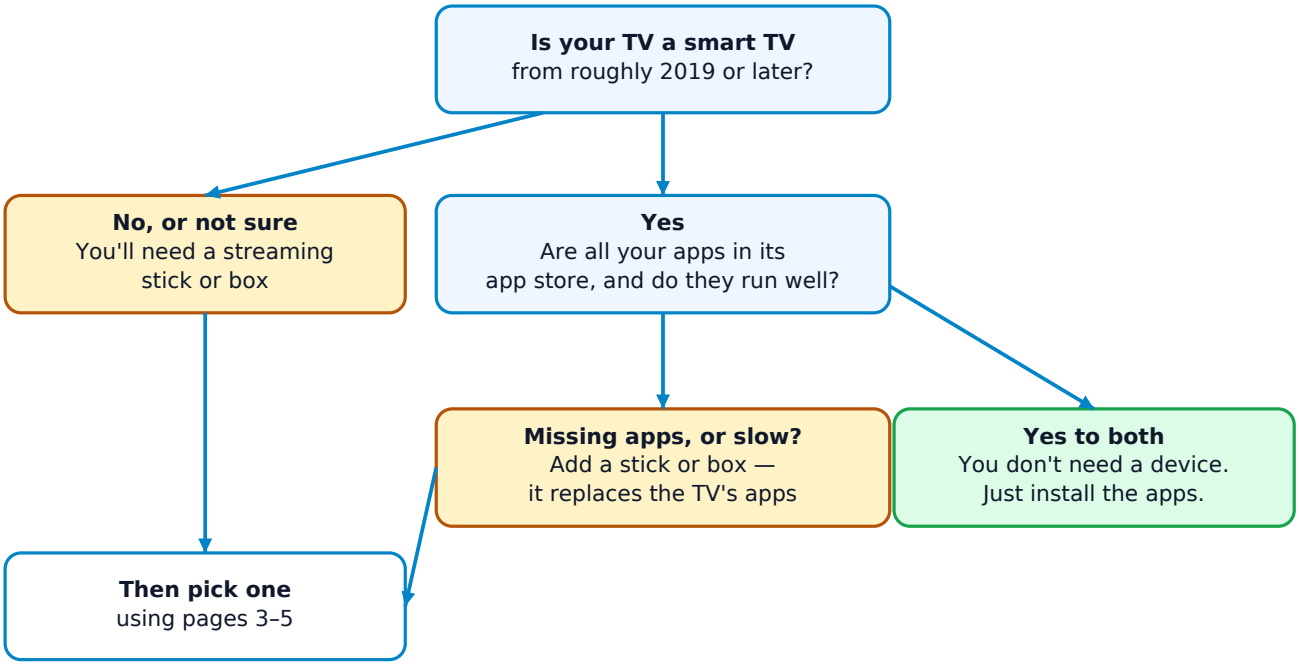

Figure 1. Deciding whether you need a streaming device.

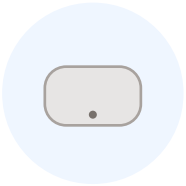

The quick test

Open your TV's app store and search for **RTÉ Player**, **Virgin Media Play** and any paid service you use. If they're all there and the menus don't lag, you're done. If an app is missing, or your TV no longer gets software updates, a streaming stick is usually the cheapest fix — far cheaper than a new TV.

The five types of streaming setup

Streaming stick
Fire TV Stick

Streaming box
Google TV Streamer

Premium box
Apple TV 4K

Smart TV apps
Samsung, LG, Sony…

Provider box
Sky Stream, Virgin 360

Type	What it is	Good for	Watch out for
Streaming stick	Plugs straight into an HDMI port; powered from the wall	Cheapest way to modernise any TV with HDMI	Wi-Fi only on most sticks unless you add an adapter
Streaming box	A small box beside or behind the TV	Faster, more storage, often an Ethernet port	Costs more than a stick
Premium box	Apple TV 4K	iPhone households, polished interface, long software support	Highest price
Smart TV apps	Apps built into the TV (Samsung, LG, Sony, Philips, TCL, Hisense…)	No extra box or remote	Older TVs stop getting app updates; some apps disappear
Provider box	Sky Stream, Virgin TV 360, Eir Vision box	One remote for live channels, recordings and apps	Tied to a monthly TV contract

Stick to official app stores

Every device in this guide is a mainstream product that runs licensed apps from an official app store. Install RTÉ Player, TG4 Player, Virgin Media Play and GAA+ from your device's Irish app store, as apps from a UK or US store account may not work.

The main devices, compared

Amazon Fire TV

The most common choice in Irish homes: an Alexa voice remote, frequent sales and, on Fire OS models, wide app support. The range runs from the Fire TV Stick HD to the Fire TV Stick 4K, 4K Plus and 4K Max and the hands-free Fire TV Cube.

- **Best for:** most households, especially Amazon Prime members.
- **Watch out:** the home screen promotes Prime Video content heavily.
- **Fire OS or Vega OS?** The Fire TV Stick 4K (3rd gen, 2026), Fire TV Stick HD (2026) and Fire TV Stick 4K Select (2025) run Amazon's newer Vega OS, not Fire OS. Vega OS has fewer apps, and it isn't confirmed that RTÉ Player, Virgin Media Play or TG4 Player are available on Vega models. For Irish apps, the safe pick is the Fire TV Stick 4K Max (2nd gen, 2023), which runs Fire OS (the Fire TV Stick 4K Plus also does, where it's sold). Before you buy, check that the listing says which OS the stick runs.

Google TV Streamer

Google's replacement for the Chromecast with Google TV, which was discontinued in 2024. It's a small box rather than a stick, with 4K HDR and Dolby Vision, 32GB of storage, built-in casting, an Ethernet port and a smart-home panel. It's sold in Ireland on the Google Store; check the current price there.

- **Best for:** Android phone users, and anyone who casts a lot from their phone.
- **Watch out:** pricier than basic sticks. If you already own a Chromecast with Google TV, it still works — there's no need to replace it.
- **NOW:** NOW's Irish device list names the Chromecast with Google TV but not the Google TV Streamer yet, so check NOW's own list before you buy it mainly for NOW.

Apple TV 4K

The most polished interface and the longest software support, with tight iPhone integration (AirPlay, quick sign-in from your iPhone). RTÉ Player and GAA+ both have Apple TV apps.

- **Best for:** iPhone households who want a premium, ad-light experience.
- **Watch out:** the most expensive option here.
- **New for 2026:** the 4th-generation Apple TV 4K was announced on 13 October 2026 and is in shops from 13 November 2026. Check the current price before you buy.

Roku

Simple, uncluttered menus and a straightforward remote, which suits less tech-confident viewers. Roku is sold in Ireland, including on Amazon.ie.

- **Best for:** anyone who finds other menus confusing.
- **Watch out:** check TG4 Player if you need it, as it isn't confirmed on Roku. Roku says RTÉ Player is officially available on Roku in Ireland, Virgin Media Play is in the Roku Channel Store, and GAA+ lists Roku as supported.

Smart TVs and provider boxes

Smart TV platforms

Platform	Found on	Notes
Tizen	Samsung	Strong app support on recent models. GAA+ supports Samsung TVs from 2021 onwards
webOS	LG	Well supported by Irish apps, including RTÉ Player and GAA+
Google TV / Android TV	Sony, Philips, TCL, Hisense (some)	Uses the Google Play store, so most apps are available
Fire TV built in	Xiaomi, Panasonic (some), Amazon-branded TVs	Same app store as a Fire TV Stick
VIDAA	Hisense	Smaller app store — check for Irish apps before buying

Rule of thumb: TV makers only keep updating a model's apps for a number of years. After that, apps may slow down or be withdrawn, and a stick is the cheapest way to keep the TV useful.

Provider boxes

If you pay for Sky, Virgin Media or Eir TV, your box already runs many of the apps you need, including RTÉ Player on Sky and Virgin TV 360. Check what your box offers before buying another device — you may only need one for a service your provider doesn't carry.

Which one should you buy?

If you…	Our suggestion
Want the easiest all-rounder	Amazon Fire TV Stick 4K Max (Fire OS)
Have an older TV in a bedroom or kitchen	Fire TV Stick 4K Max (Fire OS) — fine on HD TVs too
Use an Android phone and cast a lot	Google TV Streamer
Live in the Apple world	Apple TV 4K
Want the simplest possible menus	Roku (check TG4 Player if you need it)
Have a recent Samsung or LG TV	Probably nothing — try the built-in apps first
Watch lots of live sport in 4K	A box with an Ethernet port, wired to your router

Buying a Fire TV stick? Check that the listing says it runs Fire OS. Some newer models run Vega OS, which has fewer apps.

Setting up a streaming stick in 10 minutes

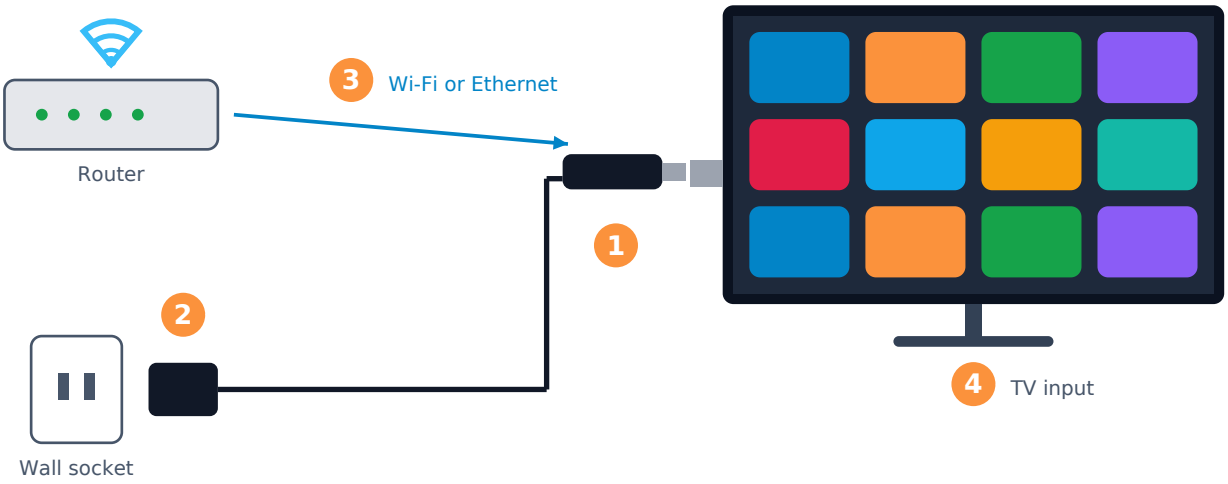

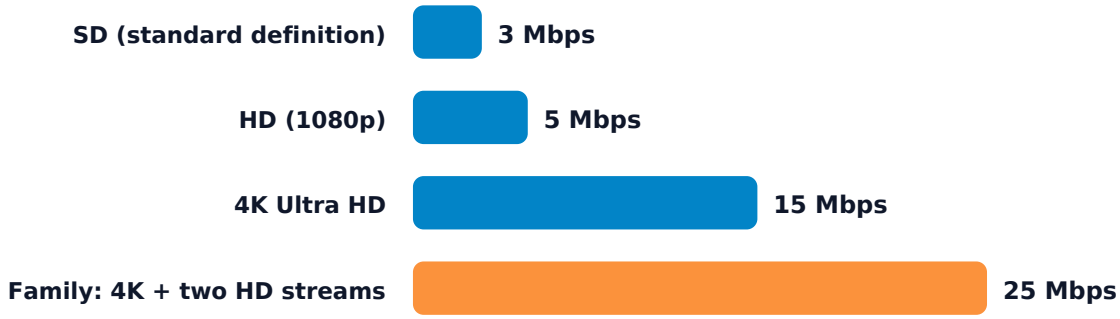

Figure 2. 1 stick into the HDMI port · 2 power from the wall · 3 Wi-Fi from your router · 4 switch the TV to that input.

1. **Plug in.** Put the stick in a free HDMI port. If it won't fit, use a short HDMI extender (Fire TV sticks include one) — it also improves Wi-Fi reception.
2. **Power it from the wall.** Use the supplied adapter. TV USB ports often don't give enough power, which causes random restarts.
3. **Pick the input.** Press Input or Source on your TV remote and choose the HDMI port you used.
4. **Join Wi-Fi and sign in.** Follow the on-screen steps and sign in to your Amazon, Google, Apple or Roku account.
5. **Install your apps.** Start with RTÉ Player, Virgin Media Play and TG4 Player (all free), then your paid services.
6. **Sign in to each app.** Most show a short code on screen that you enter on your phone — quicker than typing passwords with a remote.
7. **Tidy up.** Turn on HDMI-CEC (sometimes called Anynet+, SimpLink or Bravia Sync) so one remote controls the TV volume and power.

Broadband and Wi-Fi: the real secret to smooth streaming

Most buffering isn't the device's fault — it's the connection between your router and the TV. Here's how much speed you need, per stream:

Per-stream figures are Netflix's recommendations; the family figure adds them together.

Figure 3. Recommended broadband speed per stream. Source: Netflix Help Centre.

Five fixes that work

1. **Run a speed test on the TV itself** (most devices have one in Settings, or use the Netflix app's network check). Your broadband may be fast at the router but slow at the TV.
2. **Use Ethernet where you can.** A cable, or a USB Ethernet adapter for a stick, beats Wi-Fi every time for live sport.
3. **Move the router out of cupboards** and away from the TV's metal back panel. Thick stone walls are common in Irish houses and block Wi-Fi badly.
4. **Add a mesh system** if the TV is two or more rooms from the router. It works better than a single plug-in extender.
5. **Restart everything** — router, then device — if streams suddenly get worse. It fixes most sudden slowdowns.

Useful extras

A certified **High-Speed or Ultra High-Speed HDMI cable** for 4K HDR boxes, a **long Ethernet cable** or **mesh Wi-Fi** for distant rooms, and a **soundbar** — the single biggest upgrade over TV speakers. See our Best Prices page on onairireland.ie for current options.
